Weed Man[®]
"We care for your lawn."

Weed Man's Services

FERTILIZATION

Our exclusive, golf course quality, slow-release fertilizer feeds the lawn gradually and ensures proper nutrition and root development.

WEED CONTROL

The latest products and technology, calibrated for maximum effectiveness against broadleaf weeds.

CRABGRASS CONTROL

Weed Man's pre-emergent solution can help prevent crabgrass from germinating and taking over your lawn.

SURFACE INSECT CONTROL

Experienced lawn care technicians can identify turf-damaging insects and offer solutions to stop or prevent pest damage to your lawn.

CORE AERATION

Aeration re-oxygenates your turf, allowing more efficient delivery of water, nutrients, and fertilizer to your lawn's root zone.

OVERSEEDING

Let Weed Man strengthen your turf with high-quality grass seed to help replenish bare or damaged areas of your lawn.

GRUB CONTROL

Weed Man can help prevent, control, and eliminate white grubs in your lawn, saving you from costly turf repair or renovation.

DALLISGRASS CONTROL

Weed Man can eliminate unsightly dallisgrass from your lawn using our effective control products.

LAWN DISEASE CONTROL

Lawn diseases can arise for a multitude of reasons. Weed Man can develop an effective treatment plan for all forms of turf disease.

ORGANIC LAWN DRESSING

Weed Man's organic lawn dressing service delivers the ideal amount of nutrients without smothering the grass.

NUTSEGE CONTROL

Nutsedges resemble common, desirable grasses. However, these grassy weeds can be incredibly difficult to control. Weed Man can help!

PERIMETER PEST CONTROL

Our perimeter spray forms a barrier protection to stop invasive pests on the outside (before they enter your home!).

SOIL PH CONTROL

Soil is the foundation of your lawn. Weed Man can restore proper pH to your soil through the careful application of lime.

MOSQUITO CONTROL

Targets areas where mosquitoes live, rest, and hide. Guaranteed to reduce mosquito populations in your yard.

Notes About Our Service

SERVICE CALLS

- Weed Man has become the leader in the lawn care industry by providing great looking lawns to happy customers.
- If your lawn does not look great, or if you are unhappy with any aspect of our service, PLEASE CALL US IMMEDIATELY. Service calls are always free and unlimited. We're here to help!

CONTINUOUS SERVICE

- Once you are a Weed Man customer, we want you to be a customer for life and will return unless you tell us to stop. To terminate service, simply notify us by telephone at 770-998-7868 and speak to our customer service representative. You may also email us at office@weedmanroswell.com or write to us at 1213 Canton Street, Suite 200, Roswell, GA 30075. We hope you will continue our service, as no matter what is going on with your lawn, we can help you make and keep it beautiful.

TROUBLE SHOOTING GUIDE

PROBLEM	SIGNS & SYMPTOMS	REMEDIES
Lack of Water or Drought Stress	The lawn turns silvery blue in patches and, if not watered, will turn brown. The grass will not spring back after being stepped on and your footprints may remain clearly visible.	Water your lawn as soon as possible. At least 2 inches the first time and again within a couple of days until the soil is moist.
Surface Insect Damage	Often mistaken for drought, but the lawn does not recover after it is watered. The damage shows up as yellow/brown patches.	Give us a call. One of our Weed Man professionals will inspect your lawn at no extra charge and diagnose the problem.
Sub Surface Insects (White Grubs)	Yellow or brown patches of grass, animals or birds digging up the lawn, turf easily lifts up from the roots.	Give us a call. One of our Weed Man professionals will inspect your lawn at no extra charge and diagnose the problem.
Mushrooms	Visible mushrooms on the lawn. Although they may not look good, they do not damage the turf.	Remove the mushrooms by hand, with a mower, or by using a stiff rake.
Turf Diseases	Often mistaken for drought or insect damage or even burns.	Give us a call. One of our Weed Man professionals will inspect your lawn at no extra charge and diagnose the problem.

How You Can Help

Lawn care is a partnership. Our services have proven to be most effective when customers implement proper mowing and watering practices. We appreciate your collaboration in helping your lawn look its best!

Mowing

FREQUENCY

Grass does not grow at the same pace during the season. You should mow your lawn when it needs it. Once a week is usually enough, but this may vary throughout the growing season.

In the spring and fall when the weather is cooler and your lawn is growing more rapidly, you may need to mow twice a week.

During the hot dry months of summer, the growth of your lawn will slow and you may only need to mow once every two weeks.

HEIGHT

Lawns should be mowed regularly at their proper heights (see below). This means that your lawn may require mowing more than once a week during peak growth and only once every two weeks during periods of slow growth. Since the root system of a grass plant grows proportionally to the above ground parts of the plant, a longer cutting height results in a stronger, deeper root system. Calculate your mower blade height by measuring the distance between the ground and the base of your lawn mower.

Cool Season Grasses

Tall Fescue – 3 to 4 inches

Warm Season Grasses

Common Bermuda – 2 to 3 inches

Hybrid Bermuda – 2 to 3 inches

St. Augustine – 2 to 4 inches

Zoysiagrass – 1 to 2.5 inches

Centipede grass – 1 to 2 inches

MOWER BLADES

A sharp mower blade will make a clean, precise cut that heals quickly.

A dull mower blade will chew and fray the ends of the grass blades. As a result, they will turn brown and increase moisture loss, making your lawn more susceptible to potential problems.

TEMPERATURE

Try to avoid mowing your lawn when the temperature is above 80° F or your lawn is showing signs of drought.

CLIPPINGS

As long as you are mowing often enough that the clippings are an inch or less in length, you can leave the clippings on your lawn.

Mulching the clippings returns moisture and nutrients to the soil (and you will not take up valuable landfill space!).

If you do need to remove the clippings, there is no harm done; however, you may find that your lawn needs to be fertilized more often.

Watering

AMOUNT

- Lawns require two inches of water per week to stay green and growing.
- Water twice per week, an inch at a time. Use an empty coffee can or a watering gauge to make sure your lawn is getting the right amount of water each time.
- Rainfall seldom provides ample moisture. Further watering is needed for lawns to do their best.
- Extra watering may be required during hot, windy weather to help offset rapid evaporation.

TIMING

- In the spring, it is tempting to start watering early, but there is usually plenty of rain to keep your lawn healthy. Wait to water until the weather gets warm and dry.
- Water early in the morning for best results.
- Watering late in the day or at night can promote fungal growth, leading to disease problems in your lawn.
- If your lawn is severely dry, be sure to water it immediately regardless of the time of day.

Our Promise

We would love to tell you that when you are a Weed Man customer, you will never have a lawn issue again, but that's not reality. You will. There will always be pressure from hard-to-control weeds, disease, pests and heat stress, as your lawn is a living, breathing, ever-changing part of nature with specific needs unique to your property.

With that being said, if you notice any problems or re-growth between services, contact us! We will happily return to your property for service calls or spot treatments, as needed.
